

Taylor Czerwinski

taylorczerwinski2017@gmail.com | 949-633-5952 | Highland Park, IL

Profile

Computer Science graduate building secure, data-driven solutions. Hands-on experience in cybersecurity, data analysis, database administration, and machine learning projects. Skilled in Python and SQL, with security tool experience (Active Directory, SentinelOne, IdentityNow) and a track record of building end-to-end data pipelines and applications. Seeking a role in data engineering, data science, or cybersecurity.

Education

Marquette University — Bachelor of Science in Computer Science, Minor in Mathematics

Relevant Coursework: Artificial Intelligence, Data Science, Data Mining, Software & System Security, Ethical Hacking, Linear Algebra & Matrix Theory, Number Theory

Technical Skills

Languages: Python, SQL, C++, Java, Swift, HTML

Databases & Tools: SQL Server, SQL Server Management Studio, SQLite, Git, Linux, Jira, Trello, Jupyter Notebook, Postman, Excel, Word, Outlook

Cybersecurity: Active Directory, PowerShell, Proofpoint, SentinelOne, IdentityNow, Exabeam

Libraries & Packages: Pandas, Matplotlib, NumPy, Requests, Scikit-learn, XGBoost, Flask, Beautiful Soup

Work Experience

Intern – Information Security Team

Children's Hospital of Wisconsin | Sept 2024 – Present

- Act as the primary point of contact for initial ticket triage and work cross-functionally with teams to resolve technical issues.
- Support user provisioning, access reviews, and password resets while maintaining strict confidentiality.
- Gain hands-on experience with Active Directory, PowerShell automation, SentinelOne, Proofpoint, IdentityNow, Exabeam, and identity and access management (IAM) processes.
- Triage and investigate SentinelOne security alerts, perform endpoint agent reinstallation and troubleshooting, and escalate potential security incidents as needed.
- Assist with SQL Server installation, configuration, and maintenance to support secure application and database environments.

Intern – Database Administrative Team

Trustmark | May 2022 – Aug 2022

- Tuned queries within stored procedures and triggers for speed and efficiency.
- Completed a server purge project and optimized indexing using Brent Ozar Blitz Indexing.
- Created documentation for the team on Quest's Foglight tool.

Projects

Inventory Management System

Milwaukee Brewers | 2024–2025

- Built a Swift-based inventory application to track device ownership and toner levels.
- Designed and maintained a MySQL database for the application backend.
- Integrated REST APIs to parse real-time JSON responses into the database.
- Delivered a user-friendly interface for accessing inventory information.

Data Professional Salary Prediction

Marquette University | 2024

- Merged multi-year salary datasets and performed exploratory data analysis (EDA) to identify trends and outliers.
- Cleaned, normalized, and engineered features by encoding categorical variables and standardizing job titles.
- Trained and tuned a RandomForestRegressor model to predict salaries based on job title, experience, location, and technical skills.
- Evaluated model performance using MAE, MSE, RMSE, and R² metrics.
- Developed a user-input system to preprocess data and generate real-time salary predictions.

Book Recommendation & Rating Prediction System

Personal Project | 2026

- Built a content-based book recommendation engine combining Goodreads ratings with Open Library metadata (author, publication year, editions, series).

- Trained and compared six regression models (Linear, Ridge, Lasso, Random Forest, Gradient Boosting, XGBoost) to predict average Goodreads ratings, evaluated using MAE, RMSE, and R^2 .
- Generated similarity-scored book recommendations from a user-selected title using Python, Pandas, NumPy, and scikit-learn.

Mass Shooting Data Analysis

Personal Project | 2025

- Cleaned and analyzed U.S. mass shooting incident data from 2018–2022 using Python, Pandas, and SQL.
- Built visualizations of monthly and state-level trends with Matplotlib to surface patterns across five years of data.
- Delivered exploratory data analysis and statistical insights in a Jupyter Notebook.
